SUMMARY

I'm a final-year CS student who builds AI products end to end, on my own — three so far. I design the MongoDB schema, write the Express API, build the React frontend, and wire up the model behind it. What interests me most is retrieval, tool-calling agents, and the unglamorous work of making an agent safe to put in front of real users.

3 products built & shipped solo · ~780 ms RAG retrieval, zero hallucinations · 10-tool agent over MCP · 98th percentile, HEC NSCT

EDUCATION

BSc in Computer Science, University of Peshawar Expected 2026 · Peshawar, Pakistan
GPA 3.9 / 4.0

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
Frontend	React 19, Next.js 14, React Router, Tailwind CSS, Material-UI, Framer Motion, Vite, responsive design
Backend	Node.js, Express 5, RESTful APIs, JWT auth, WebSockets (Socket.io), Server-Sent Events, BullMQ, Redis
Databases	MongoDB, Mongoose, aggregation pipelines, full-text & vector search, MySQL, PostgreSQL
AI Engineering	Gemini API, OpenAI API, LangChain, RAG pipelines, embeddings & semantic search, tool-calling agents, Model Context Protocol (MCP), JSON Schema tool design, prompt-injection defence
Tools & Platforms	Git, GitHub, Docker, Postman, Stripe, Cloudinary, Clerk, npm, VS Code
Practices	Agile/Scrum, UI/UX, web performance optimisation, secure API design, Jest, Mocha

PROJECTS

BotForge — No-Code AI Chatbot Platform Dec 2025 – Aug 2026
Stack: React · Node.js · Express · MongoDB · Gemini API botforge.danishraza.dev

- **Sole developer** of a no-code platform for creating, training, and embedding AI chatbots on any website via a drop-in widget, with Telegram delivery and PDF/CSV/TXT ingestion.
- Engineered a **four-tier parallel RAG pipeline** (`Promise.all`) merging weighted scores from semantic cosine similarity (3072-dim Gemini embeddings), MongoDB full-text search, regex, and fuzzy matching — **zero hallucinations** at ~780 ms.
- Shipped analytics dashboards, conversation history, config panels, and a **three-tier subscription** (Starter/Pro/Business).

EventVerse — Event Ticketing Platform with an AI Booking Agent Jul 2025 – Aug 2026
Stack: React 19 · Node.js · Express 5 · MongoDB · Gemini API · MCP · Cloudinary events.danishraza.dev

- Built a role-based event marketplace (admin / organiser / customer) across 35 REST endpoints — approval workflow, **atomic ticket inventory** that cannot oversell under concurrent booking, QR check-in, and aggregation dashboards.
- Built an in-app AI assistant on a **hand-written tool-calling loop** — no agent framework — exposing 10 role-scoped tools with SSE token streaming, and re-exposed them as a Model Context Protocol server any MCP client can drive.
- Designed its security in code, not the prompt: writes are **proposed, never performed** behind a single-use confirmation id; ownership is re-checked on every model-chosen id — a guard that caught the model reaching a rival organiser's analytics.

Footalyzer — AI Football Companion App May – Aug 2026
Stack: Next.js 14 · Express · MongoDB · Redis (Upstash) · BullMQ · Socket.io · Clerk · Stripe footalyzer.danishraza.dev

- Built and deployed a football platform serving **AI-generated match briefings** alongside live scores across major competitions including the Premier League and Champions League.
- Architected the backend on Node.js/Express with MongoDB and Redis (Upstash), BullMQ for background jobs and Socket.io for real-time score push.
- Integrated Clerk auth and Stripe subscription billing, taking the product from concept to a live public deployment.

ACHIEVEMENTS & CERTIFICATIONS

- **98th percentile** — HEC National Skill Competency Test (NSCT), Pakistan, 2026
- Full Stack Web Development — Angela Yu / Udemy, 2025 · Google Agile Essentials — Coursera, 2025
- Google Introduction to AI — Coursera, 2025 · Google Frontend Development Bootcamp, 2023
